Projects

JobHub

JobHub is a comprehensive job portal designed to streamline the hiring process for both job seekers and recruiters. Recruiters can manage job postings by adding, editing, and updating them, search for job titles, view applied candidates, and download resumes. Jobseekers can filter jobs and search for them by title and location. Admins can view the total number of registered recruiters and jobseekers. The application is built with React, Node.js, Express.js, MongoDB, and JWT for authentication. For state management, Context API is used.

Chat Application

A real-time chat application developed using React for the front end and WebSocket.io for enabling live, bidirectional communication between users. The application provides a seamless and responsive interface, allowing users to engage in instant messaging across multiple devices.

Recipe Listing Application

A recipe listing application developed using React.js with Recipe API integration for listing recipes. Users can search recipes by cuisine and view details such as cooking time, instructions, ingredients, rating, meal type, etc.

Task Management Application

Task management application build with react.js and JSON-Server. User can add, update and delete tasks and also user can view completed task history and manage . JSON-server used for store data permanently.
